

Alex Chen

Senior Java Platform Engineer | 7 years experience | Shanghai

Email: alex.chen@example.com | GitHub: <https://github.com/example-dev>

Summary

Senior backend engineer focused on payment platform, distributed systems, observability, and production incident response.

Skills

Java 17, Spring Boot 3, Kafka, Kubernetes, Redis, MySQL, Docker, Prometheus, Grafana, OpenTelemetry, SQL optimization.

Experience

2021.05 - Present FinTech Payment Platform Senior Backend Engineer

- Led payment platform refactor from monolith to domain services, including order, settlement, reconciliation, and risk-control modules.
- Designed Kafka-based asynchronous transaction pipeline with idempotency keys, retry topics, and dead-letter handling.
- Reduced P99 payment callback latency from 1.8s to 420ms by SQL index redesign, cache warmup, and connection pool tuning.
- Built observability dashboards for payment success rate, settlement lag, consumer backlog, JVM GC, and API latency.

2018.07 - 2021.04 SaaS Logistics Platform Backend Engineer

- Built shipment tracking APIs with Spring Boot and MySQL, handled 30M tracking events per day.
- Introduced Redis cache and rate limiting to protect partner integrations.

Projects

Payment Reconciliation Engine

- Implemented daily reconciliation between payment gateway, internal ledger, and settlement files.
- Added audit trace id to every payment state transition for compliance investigation.

Education

2014.09 - 2018.06 East China University of Science and Technology B.S. Software Engineering
