

Xie Ting

Gender: Female Objective: AI Agent Engineer Location: Shanghai

Phone: 15060906913 Email: xieting9235@gmail.com GitHub: <https://github.com/xieting559>

Education

2012.09 - 2016.06 Huazhong University of Science and Technology Information Security (B.S.)

Courses: Design Patterns, Computer Organization, Software Engineering, Compilers, Database Systems, Distributed Systems

GPA 3.8/4.0, top 10% in major; merit scholarship

Summary

Backend engineer building production AI-agent workflows, RAG pipelines and runtime observability, skilled in multi-agent orchestration and tool governance.

Work Experience

2019.07 - Present Baidu Senior AI Agent Engineer

- Integrated an MCP resume-evidence service and dynamic skill loading for evidence synthesis and tool governance, recognized by stakeholders and peers.
- Wired the full LLM call chain into Langfuse, tracking hit count, top score, fallback rate and latency per step.
- Added structured constraints and validation on LLM output to reduce hallucination, raising key-field extraction accuracy above 90%.
- Handled 7100K agent invocations per day while keeping the online service stable, significantly lowering maintenance cost.
- Built backend of a multi-agent resume evaluation workflow chaining intent router, parser, JD matcher, technical/risk evaluators and report generator.

2016.07 - 2019.06 Huawei AI Agent Engineer

- Designed an agent runtime with route plan, tool budget, policy guardrails, trace replay and an evaluation feedback loop, significantly lowering maintenance cost.
- Implemented hybrid RAG fusing BM25 lexical recall, vector search, reranking and fallback visibility, raising evidence hit rate by 24%, ensuring online service stability.
- Designed prompt templates with version management supporting gray release and A/B, improving iteration speed by 16%.
- Tuned Milvus index and sharding strategy, reducing retrieval latency from 2600ms to 320ms, reused across multiple business lines.

Projects

Enterprise Knowledge Base QA (LangChain + Milvus + Redis)

- Implemented document chunking and multi-route recall to improve long-document QA.
- Built online evaluation and a feedback loop.
- Supported multi-turn conversation memory and context management.
- Added reranking and citation tracing to reduce off-topic answers, significantly lowering maintenance cost.

st.

ResumAI Agent - Intelligent Resume Evaluation Platform (Spring Boot + Vue3 + Milvus + Neo4j + DeepSeek)

- Implemented RAG evidence retrieval with citation tracing for explainable conclusions, recognized by stakeholders and peers.
- Orchestrated a multi-agent evaluation flow with a DAG covering parsing, matching, evaluation and report generation.
- Built a Neo4j knowledge graph linking job skills and candidate abilities.
- Integrated Prometheus and Grafana for full-link observability, with experience documented and shared internally.

Customer Service Agent (FastAPI + LangGraph)

- Improved user satisfaction by 24%.
- Designed human fallback and escalation for better experience.
- Designed tool orchestration and function calling to connect business systems, with experience documented and shared internally.
- Implemented intent recognition and slot filling to raise resolution rate, recognized by stakeholders and peers.

Highlights

- Work around Prompt engineering and evaluation delivered about 24% efficiency gains and was reused across the team
- Established metrics and reviews around LangGraph/LangChain agent orchestration to keep improving delivery quality
- Owned core modules that steadily served 7100K daily visits with 99.9%+ availability
- Drove a focused effort on Milvus vector database, reducing related issues by about 16%
- Continuously optimized root-cause analysis and postmortems, cutting key-path latency from 2600ms to 320ms

Skills

Core skills: LLM observability and tracing, Milvus vector database, Spring AI / FastAPI services, Python, Agent

Proficient in: LangGraph/LangChain agent orchestration, Prompt engineering and evaluation, MCP, LangGraph, RAG

Familiar with: Spring AI, Observability, RAG retrieval and reranking, LLM, Milvus, Tool Orchestration

Self Evaluation

- Curious about new tech, continuously learning LLM and cloud-native topics and applying them in practice
- Business-minded, good at balancing technical design against delivery timelines
