

Liang Ting

Gender: Female Objective: AI Agent Engineer Location: Hangzhou

Phone: 13380049832 Email: liangting1372@gmail.com

Education

2010.09 - 2014.06 Nanjing University Data Science and Big Data Technology (M.S.)

Courses: Distributed Systems, Machine Learning, Compilers, Database Systems, Computer Networks, Data Structures and Algorithms

GPA 3.7/4.0, top 5% in major; merit scholarship

Summary

Backend engineer building production AI-agent workflows, RAG pipelines and runtime observability, skilled in multi-agent orchestration and tool governance.

Work Experience

2017.07 - Present Meituan Senior AI Agent Engineer

- Built an offline evaluation set and automated scoring covering faithfulness, relevance and usability.
- Handled 8170K agent invocations per day while keeping the online service stable.
- Integrated an MCP resume-evidence service and dynamic skill loading for evidence synthesis and tool governance, with experience documented and shared internally.
- Added structured constraints and validation on LLM output to reduce hallucination, raising key-field extraction accuracy above 90%.
- Wired the full LLM call chain into Langfuse, tracking hit count, top score, fallback rate and latency per step.

2014.07 - 2017.06 Xiaohongshu AI Agent Engineer

- Designed prompt templates with version management supporting gray release and A/B, improving iteration speed by 21%.
- Built backend of a multi-agent resume evaluation workflow chaining intent router, parser, JD matcher, technical/risk evaluators and report generator.
- Designed an agent runtime with route plan, tool budget, policy guardrails, trace replay and an evaluation feedback loop, and related standards were adopted by the team.
- Tuned Milvus index and sharding strategy, reducing retrieval latency from 1200ms to 180ms.

Projects

ResumAI Agent - Intelligent Resume Evaluation Platform (Spring Boot + Vue3 + Milvus + Neo4j + DeepSeek)

- Orchestrated a multi-agent evaluation flow with a DAG covering parsing, matching, evaluation and report generation, improving end-to-end delivery quality.
- Integrated Prometheus and Grafana for full-link observability, significantly lowering maintenance cost.
- Built a Neo4j knowledge graph linking job skills and candidate abilities.
- Implemented RAG evidence retrieval with citation tracing for explainable conclusions, and it became a reusable team best practice.

Enterprise Knowledge Base QA (LangChain + Milvus + Redis)

- Added reranking and citation tracing to reduce off-topic answers, supporting rapid business growth.
- Supported multi-turn conversation memory and context management.
- Built online evaluation and a feedback loop.
- Implemented document chunking and multi-route recall to improve long-document QA, reused across multiple business lines.

Customer Service Agent (FastAPI + LangGraph)

- Implemented intent recognition and slot filling to raise resolution rate.
- Designed tool orchestration and function calling to connect business systems, ensuring online services stability.
- Improved user satisfaction by 29%.
- Designed human fallback and escalation for better experience, significantly lowering maintenance cost.

Highlights

- Established metrics and reviews around Git collaboration and code review to keep improving delivery quality
- Led a major technical effort involving Linux and shell basics, staying stable at 8000 QPS peak
- Continuously optimized design patterns and refactoring, cutting key-path latency from 1200ms to 180ms
- Work around RAG retrieval and reranking delivered about 29% efficiency gains and was reused across the team
- Built a reusable methodology and docs around unit testing and quality, adopted by several teams

Skills

Core skills: RAG, Observability, Tool Orchestration, Milvus, Spring AI

Proficient in: LLM observability and tracing, Prompt engineering and evaluation, Python, LangGraph, MCP

Familiar with: Agent, LangGraph/LangChain agent orchestration, Milvus vector database, LLM, RAG retrieval and reranking, Spring AI / FastAPI services

Self Evaluation

- Stays calm under pressure and recovers services quickly during high-concurrency incidents
- Solid engineering fundamentals and strong troubleshooting skills, able to own a module end to end
