

Yang Ming

Gender: Male Objective: Machine Learning Engineer Location: Beijing

Phone: 15567294424 Email: yangming2822@outlook.com GitHub: <https://github.com/yangming879>

Education

2016.09 - 2020.06 Southeast University Communication Engineering (M.S.)

Courses: Distributed Systems, Data Structures and Algorithms, Database Systems, Operating Systems, Design Patterns, Software Engineering

GPA 3.8/4.0, top 15% in major; merit scholarship

Summary

ML engineer focused on recommendation/search feature engineering and model iteration with serving and A/B evaluation.

Work Experience

2022.07 - Present a fintech company Machine Learning Engineer

- Owned feature engineering and model iteration for recommendation/search, lifting online CTR by 28%, recognized by stakeholders and peers.
- Designed A/B experiments to evaluate strategies with metric dashboards, and it became a reusable team best practice.
- Adopted MLflow for experiment and model version management, supporting rapid business growth.
- Optimized feature store and realtime features, cutting end-to-end latency by 25%.

2020.07 - 2022.06 Huawei Junior Machine Learning Engineer

- Built model training and serving pipelines for offline training and online inference.
- Handled class imbalance and cold-start to improve long-tail performance.
- Implemented deep models with PyTorch with steady offline metric gains.

Projects

Recommendation Ranking Model (PyTorch + Feature Store)

- Designed feature engineering and sample construction, significantly lowering maintenance cost.
- Trained a ranking model with PyTorch, lifting CTR by 28%, and key metrics improved steadily.
- Validated gains via A/B experiments.
- Integrated a feature store for realtime features, recognized by stakeholders and peers.

Model Serving Platform (MLflow + Triton)

- Supported gray release.
- Managed experiments and model versions with MLflow, and it became a reusable team best practice.
- Served models for online inference, reused across multiple business lines.
- Monitored model performance and drift.

Highlights

- Work around cross-team communication delivered about 28% efficiency gains and was reused across the team

- Continuously optimized Machine learning and deep learning, cutting key-path latency from 1800ms to 260ms
- Drove a focused effort on requirement analysis and documentation, reducing related issues by about 25%
- Built a reusable methodology and docs around design patterns and refactoring, adopted by several teams
- Established metrics and reviews around RESTful API design to keep improving delivery quality

Skills

Core skills: Recommendation/search systems, A/B experimentation, Feature engineering, MLflow

Proficient in: Machine Learning, Machine learning and deep learning, A/B Testing, Recommendation

Familiar with: PyTorch, Feature Engineering, PyTorch modeling, Model serving, Model Serving, Python

Self Evaluation

- Business-minded, good at balancing technical design against delivery timelines
- Curious about new tech, continuously learning LLM and cloud-native topics and applying them in practice
