

Cao Jiahao

Gender: Male Objective: Junior Frontend Engineer Location: Chengdu

Phone: 19727676877 Email: caojiahao5999@outlook.com GitHub: <https://github.com/caojiahao582>

Education

2019.09 - 2023.06 University of Electronic Science and Technology of China Communication Engineering (B.S.)

Courses: Machine Learning, Data Structures and Algorithms, Computer Organization, Operating Systems, Database Systems, Software Engineering

GPA 3.7/4.0, top 5% in major; merit scholarship

Summary

1.5 years of frontend experience focused on Vue admin dashboards, component reuse and interaction details

Work Experience

2024.03 - Present Baidu Frontend Engineer

- Implemented complex ECharts visualizations with smooth interaction over large datasets, supporting rapid business growth.
- Added tracking and frontend monitoring for blank screen, JS errors and API latency with a quality dashboard, recognized by stakeholders and peers.
- Optimized first-screen load and long-list rendering with virtual scrolling and lazy loading, cutting first-screen time by 33%.
- Wrote unit and end-to-end tests to keep core interactions stable, reused across multiple business lines

2023.06 - 2023.12 NetEase Intern Frontend Engineer

- Drove engineering migration to Vite, significantly speeding up local startup and builds.
- Built admin and dashboard frontends including candidate list, report detail, trace timeline and feedback pages.
- Split a micro-frontend and onboarded sub-apps to reduce cross-team coupling, significantly lowering maintenance cost.

Projects

Resume Evaluation Platform Frontend (Vue3 + TypeScript + Vite + Pinia)

- Optimized first-screen and long-list rendering for smoother interaction.
- Built candidate list, report detail and trace timeline pages.
- Added tracking and frontend monitoring, improving end-to-end delivery quality.
- Built a reusable component library and scaffolding, reused across multiple business lines.

Component Library & Design System (Vue3 + Storybook)

- Improved reuse across teams, significantly lowering maintenance cost.
- Unified interaction and style specs.
- Documented components with Storybook, recognized by stakeholders and peers.

- Added unit and e2e tests, and it became a reusable team best practice.
- Realtime Data Visualization Dashboard (Vue3 + ECharts + WebSocket)
- Supported theme switching and dark mode.
 - Implemented live updates over WebSocket, reused across multiple business lines.
 - Optimized repaint and memory usage, recognized by stakeholders and peers.
 - Rendered complex charts over large datasets while staying smooth, improving end-to-end delivery quality

Highlights

- Led a major technical effort involving computer networking basics, staying stable at 3000 QPS peak
- Established metrics and reviews around TypeScript and tooling to keep improving delivery quality
- Drove a focused effort on Linux and shell basics, reducing related issues by about 38%
- Work around cross-team communication delivered about 33% efficiency gains and was reused across the team
- Continuously optimized root-cause analysis and postmortems, cutting key-path latency from 2200ms to 320ms

Skills

Core skills: Pinia, Componentization, CSS, HTTP

Proficient in: Vite/Webpack builds, Vite, ECharts data visualization, TypeScript

Familiar with: Vue3, ECharts, React and micro-frontends, Frontend performance optimization, Vue3 and Composition API, TypeScript and tooling

Self Evaluation

- Solid engineering fundamentals and strong troubleshooting skills, able to own a module end to end
- Business-minded, good at balancing technical design against delivery timelines
