

Han Zihan

Gender: Female Objective: Android Engineer Location: Hangzhou

Phone: 17096888831 Email: hanzihan4743@gmail.com

## Education

2014.09 - 2018.06 Huazhong University of Science and Technology Information Security (M.S.)

Courses: Design Patterns, Operating Systems, Compilers, Distributed Systems, Data Structures and Algorithms, Database Systems

GPA 3.7/4.0, top 15% in major; merit scholarship

## Summary

Android engineer focused on architecture evolution, startup/crash governance and componentization.

## Work Experience

2020.07 - Present Baidu Android Engineer

- Optimized startup, reducing cold-start from 2600ms to 380ms.
- Refactored pages with Jetpack components for maintainability.
- Owned Android client development and architecture evolution with componentization, and it became a reusable team best practice.
- Built device monitoring and gray-release capabilities, supporting rapid business growth.

2018.07 - 2020.06 Li Auto Junior Android Engineer

- Improved weak-network experience with backend.
- Optimized package size and memory, cutting package size by 27%, and it became a reusable team best practice.
- Integrated payment and media SDKs while keeping core paths stable, improving end-to-end delivery quality.

## Projects

E-commerce Android App (Kotlin + Jetpack)

- Reduced crash rate by 45%, supporting rapid business growth.
- Optimized startup and memory, reused across multiple business lines.
- Built with Kotlin and Jetpack.
- Decoupled via componentized architecture, and it became a reusable team best practice.

Componentization & Plugin Framework (Android)

- Designed module routing and communication, and key metrics improved steadily.
- Unified base libraries and conventions.
- Improved team collaboration.
- Supported dynamic loading and hotfix.

## Highlights

- Continuously optimized Componentization and plugins, cutting key-path latency from 2600ms to 380ms
- Drove a focused effort on project management and planning, reducing related issues by about 27%

- Work around Media/payment SDKs delivered about 45% efficiency gains and was reused across the team
- Established metrics and reviews around CI/CD pipelines to keep improving delivery quality
- Built a reusable methodology and docs around Jetpack components, adopted by several teams

#### Skills

Core skills: Android and Kotlin, Crash Governance, Media/payment SDKs, Performance and crash governance

Proficient in: Payment SDK, Jetpack, Performance, Device monitoring and gray release

Familiar with: Kotlin, Android, Componentization, Componentization and plugins, Jetpack components

#### Self Evaluation

- Enjoys retrospectives, cares about code quality and observability, and makes data-driven decisions
- Strong communication and collaboration with product, QA and ops to deliver projects on time
