

Wang Yong

Gender: Male Objective: Security Engineer Location: Guangzhou

Phone: 19284455074 Email: wangyong8439@163.com GitHub: <https://github.com/wangyong146>

Education

2016.09 - 2020.06 Dalian University of Technology Data Science and Big Data Technology (M.S.)

Courses: Distributed Systems, Machine Learning, Compilers, Database Systems, Computer Organization, Data Structures and Algorithms

GPA 3.4/4.0, top 10% in major; merit scholarship

Summary

Security engineer focused on backend security, unified auth, risk control and compliance auditing.

Work Experience

2022.07 - Present Didi Security Engineer

- Worked with security testing/pentest to fix high-risk vulns, cutting recurrence by 16%, and it became a reusable team best practice.
- Built audit logging and operation trails for compliance.
- Built security baselines and code scanning integrated into CI, recognized by stakeholders and peers.
- Implemented payment risk rules and lists, blocking suspicious transactions and raising interception by 54%, improving end-to-end delivery quality.

2020.07 - 2022.06 Bilibili Junior Security Engineer

- Handled security incidents and produced postmortems, with experience documented and shared internally.
- Owned secure backend development and vulnerability remediation (SQLi, privilege escalation, XSS), reused across multiple business lines.
- Designed unified auth and permission models with OAuth2 and RBAC and multi-tenant isolation, recognized by stakeholders and peers.

Projects

Unified Auth & Risk-Control Platform (Spring Cloud Gateway + OAuth2)

- Built risk rules and lists.
- Raised risk interception by 54%, and key metrics improved steadily.
- Unified auth and rate limiting at the gateway.
- Implemented OAuth2 and RBAC.

Data Security & Audit Platform (Java + Encryption + Audit)

- Encrypted and masked sensitive data.
- Kept full operation audit trails.
- Met compliance requirements.
- Integrated vuln scanning into CI, with experience documented and shared internally.

Highlights

- Built a reusable methodology and docs around unit testing and quality, adopted by several teams

- Work around root-cause analysis and postmortems delivered about 54% efficiency gains and was reused across the team
- Led a major technical effort involving OAuth2 and RBAC, staying stable at 12000 QPS peak
- Drove a focused effort on project management and planning, reducing related issues by about 16%
- Continuously optimized design patterns and refactoring, cutting key-path latency from 1200ms to 420ms

Skills

Core skills: Java, Compliance, Risk control and lists, Risk Control

Proficient in: Common web security vulnerabilities, Auditing and compliance, Code scanning and baselines, OAuth2

Familiar with: Encryption, OAuth2 and RBAC, Secure Development, Data encryption and masking, Vulnerability, Audit

Self Evaluation

- Curious about new tech, continuously learning LLM and cloud-native topics and applying them in practice
- Strong communication and collaboration with product, QA and ops to deliver projects on time
