

Han Xinyi

Gender: Female Objective: Senior Backend Engineer Location: Xian

Phone: 13235679836 Email: hanxinyi1125@163.com GitHub: <https://github.com/hanxinyi285>

Education

2012.09 - 2016.06 Tongji University Information Security (B.S.)

Courses: Computer Networks, Computer Organization, Data Structures and Algorithms, Database Systems, Software Engineering, Machine Learning

Summary

Seven years of backend experience focused on payment/transaction systems, distributed architecture, high concurrency and production incident response.

Work Experience

2019.07 - Present Huawei Senior Backend Engineer

- Rebuilt the config and template management service to support hot template reload without restart, cutting release time by 25%, with experience documented and shared internally.
- Tuned Redis caching for hot keys and cache breakdown with local cache and distributed locks, raising hit rate above 90%, supporting rapid business growth.
- Owned backend of core transaction and order services, splitting the monolith into order, settlement and risk-control microservices.
- Investigated rising instance memory rss using GC logs, heap dump and arthas, found an unbounded cache and cut memory by 47%.
- Served 7130K requests per day while keeping core-path SLA above 99.9%.

2016.07 - 2019.06 Ant Group Backend Engineer

- Designed a Kafka-based async transaction pipeline with idempotency keys, retry queues and dead-letter handling, sustaining 20000 QPS at peak, with experience documented and shared internally.
- Fixed a log-collection failure caused by agent backpressure, restoring stability after tuning batch and buffer settings.
- Optimized a file-sort slow SQL on a hot API, added a composite index via gh-ost online DDL, reducing P99 from 2600ms to 260ms, and key metrics improved steadily.
- Built service observability covering API latency, error rate, JVM GC, thread pools and consumer backlog with Prometheus and Grafana, reused across multiple business lines.

Projects

High-Concurrency Flash-Sale & Inventory System (Java + Redis + RocketMQ)

- Pre-deducted inventory in Redis with async DB writes to absorb traffic spikes.
- Stayed stable at 20000 QPS in load tests with error rate below 0.1%.
- Designed distributed locks and token-bucket rate limiting to prevent oversell, reused across multiple business lines.
- Built circuit breaking and fallback for downstream failures.

Enterprise Auth & Gateway Platform (Spring Cloud Gateway + OAuth2)

- Added circuit breaking to isolate faulty downstreams.
- Unified auth, rate limiting, gray routing and tracing as reusable platform capabilities.
- Integrated OAuth2 and RBAC with multi-tenant isolation, and key metrics improved steadily.
- Shipped a unified SDK to lower integration cost across teams, with experience documented and shared internally.

Distributed Payment & Settlement Platform (Spring Boot + MySQL + Kafka + Redis)

- Implemented daily reconciliation across payment gateway, ledger and settlement files with auto-correction.
- Applied idempotency and eventual consistency to avoid duplicate charges on retry, with experience documented and shared internally.
- Recorded an audit trace id for every payment state transition for compliance, with experience documented and shared internally.
- Used sharding and read-write splitting to keep single-table rows within tens of millions.

Highlights

- Continuously optimized Distributed transactions and consistency, cutting key-path latency from 2600ms to 260ms
- Established metrics and reviews around Kafka/RocketMQ messaging to keep improving delivery quality
- Owned core modules that steadily served 7130K daily visits with 99.9%+ availability
- Drove a focused effort on data analysis and metrics, reducing related issues by about 25%
- Built a reusable methodology and docs around unit testing and quality, adopted by several teams

Skills

Core skills: High Concurrency, MySQL, Spring Boot, Distributed transactions and consistency, Kafka

Proficient in: MySQL indexing and slow-query tuning, JVM, Redis, SQL Optimization, Redis caching and distributed locks

Familiar with: Microservices, Kafka/RocketMQ messaging, JVM tuning and troubleshooting, Docker and containerization, Observability, Java

Self Evaluation

- Solid engineering fundamentals and strong troubleshooting skills, able to own a module end to end
- Curious about new tech, continuously learning LLM and cloud-native topics and applying them in practice
