

Zhou Peng

Gender: Male Objective: Senior Frontend Engineer Location: Beijing

Phone: 19077182353 Email: zhoupeng8012@163.com

Education

2013.09 - 2017.06 University of Electronic Science and Technology of China Computer Science and Technology (B.S.)

Courses: Compilers, Database Systems, Software Engineering, Computer Networks, Distributed Systems, Computer Organization

GPA 3.6/4.0, top 20% in major; merit scholarship

Summary

Senior frontend engineer skilled in complex dashboards, visualization, performance optimization and tooling, having led micro-frontend splits.

Work Experience

2020.07 - Present Meituan Senior Frontend Engineer

- Optimized first-screen load and long-list rendering with virtual scrolling and lazy loading, cutting first-screen time by 60%, and related standards were adopted by the team.
- Built admin and dashboard frontends including candidate list, report detail, trace timeline and feedback pages, with experience documented and shared internally.
- Drove engineering migration to Vite, significantly speeding up local startup and builds.
- Split a micro-frontend and onboarded sub-apps to reduce cross-team coupling, and it became a reusable team best practice.
- Wrote unit and end-to-end tests to keep core interactions stable.

2017.07 - 2020.06 Xiaomi Frontend Engineer

- Built a shared component library and scaffolding, unifying interaction and style specs and raising reuse to 29%, significantly lowering maintenance cost.
- Defined API contracts with backend and wrapped a unified request layer and error handling, supporting rapid business growth.
- Implemented permission routing and multi-theme switching with dark mode and i18n.
- Added tracking and frontend monitoring for blank screen, JS errors and API latency with a quality dashboard.

Projects

Component Library & Design System (Vue3 + Storybook)

- Documented components with Storybook.
- Improved reuse across teams.
- Unified interaction and style specs, and key metrics improved steadily.
- Added unit and e2e tests, reused across multiple business lines.

Realtime Data Visualization Dashboard (Vue3 + ECharts + WebSocket)

- Rendered complex charts over large datasets while staying smooth.

- Implemented live updates over WebSocket.
- Supported theme switching and dark mode.
- Optimized repaint and memory usage, and key metrics improved steadily.

Resume Evaluation Platform Frontend (Vue3 + TypeScript + Vite + Pinia)

- Built candidate list, report detail and trace timeline pages.
- Added tracking and frontend monitoring, significantly lowering maintenance cost.
- Optimized first-screen and long-list rendering for smoother interaction, significantly lowering maintenance cost.
- Built a reusable component library and scaffolding.

Highlights

- Led a major technical effort involving unit testing and quality, staying stable at 8000 QPS peak
- Work around Frontend performance optimization delivered about 60% efficiency gains and was reused across the team
- Established metrics and reviews around CI/CD pipelines to keep improving delivery quality
- Drove a focused effort on RESTful API design, reducing related issues by about 29%
- Built a reusable methodology and docs around Git collaboration and code review, adopted by several teams

Skills

Core skills: Vite, TypeScript, Vue3 and Composition API, Webpack, Vue3

Proficient in: Performance, TypeScript and tooling, Frontend performance optimization, React and micro-frontends, Micro-frontend

Familiar with: Vite/Webpack builds, Visualization, Node.js, React, ECharts data visualization, Engineering

Self Evaluation

- Stays calm under pressure and recovers services quickly during high-concurrency incidents
- Solid engineering fundamentals and strong troubleshooting skills, able to own a module end to end
