

Huang Haoran

Gender: Male Objective: Senior Frontend Engineer Location: Shenzhen

Phone: 13940504726 Email: huanghaoran7835@gmail.com GitHub: <https://github.com/huanghaoran886>

Education

2013.09 - 2017.06 Huazhong University of Science and Technology Electronic Information Engineering (B.S.)

Courses: Machine Learning, Software Engineering, Operating Systems, Computer Organization, Distributed Systems, Data Structures and Algorithms

GPA 3.5/4.0, top 10% in major; merit scholarship

Summary

Senior frontend engineer skilled in complex dashboards, visualization, performance optimization and tooling, having led micro-frontend splits.

Work Experience

2020.07 - Present Huawei Senior Frontend Engineer

- Wrote unit and end-to-end tests to keep core interactions stable.
- Built admin and dashboard frontends including candidate list, report detail, trace timeline and feedback pages, and it became a reusable team best practice.
- Drove engineering migration to Vite, significantly speeding up local startup and builds, recognized by stakeholders and peers.
- Optimized first-screen load and long-list rendering with virtual scrolling and lazy loading, cutting first-screen time by 56%.
- Implemented complex ECharts visualizations with smooth interaction over large datasets, reused across multiple business lines.

2017.07 - 2020.06 Xiaomi Frontend Engineer

- Implemented permission routing and multi-theme switching with dark mode and i18n, recognized by stakeholders and peers.
- Added tracking and frontend monitoring for blank screen, JS errors and API latency with a quality dashboard, recognized by stakeholders and peers.
- Built a shared component library and scaffolding, unifying interaction and style specs and raising reuse to 42%, improving end-to-end delivery quality.
- Split a micro-frontend and onboarded sub-apps to reduce cross-team coupling, recognized by stakeholders and peers.

Projects

Resume Evaluation Platform Frontend (Vue3 + TypeScript + Vite + Pinia)

- Built candidate list, report detail and trace timeline pages, and key metrics improved steadily.
- Added tracking and frontend monitoring, significantly lowering maintenance cost.
- Optimized first-screen and long-list rendering for smoother interaction, and key metrics improved steadily.

- Built a reusable component library and scaffolding.

Realtime Data Visualization Dashboard (Vue3 + ECharts + WebSocket)

- Implemented live updates over WebSocket, supporting rapid business growth.
- Supported theme switching and dark mode, recognized by stakeholders and peers.
- Optimized repaint and memory usage.
- Rendered complex charts over large datasets while staying smooth.

Component Library & Design System (Vue3 + Storybook)

- Unified interaction and style specs, and it became a reusable team best practice.
- Documented components with Storybook.
- Improved reuse across teams.
- Added unit and e2e tests, significantly lowering maintenance cost.

Highlights

- Owned core modules that steadily served 3260K daily visits with 99.9%+ availability
- Led a major technical effort involving Vue3 and Composition API, staying stable at 3000 QPS peak
- Drove a focused effort on project management and planning, reducing related issues by about 42%
- Continuously optimized data analysis and metrics, cutting key-path latency from 1200ms to 380ms
- Work around ECharts data visualization delivered about 56% efficiency gains and was reused across the team

Skills

Core skills: Webpack, Micro-frontend, React and micro-frontends, React, Node.js

Proficient in: Performance, TypeScript and tooling, Engineering, Vite/Webpack builds, ECharts data visualization

Familiar with: Vue3 and Composition API, Frontend performance optimization, TypeScript, Vue3, Visualization, Vite

Self Evaluation

- Solid engineering fundamentals and strong troubleshooting skills, able to own a module end to end
- Stays calm under pressure and recovers services quickly during high-concurrency incidents
